**FULL MOUTH IMPLANTS- A PERMANENT
SOLUTION FOR A HEALTHIER SMILE**

Introduction

Full mouth dental implants have revolutionized restorative dentistry, offering a long-term solution for individuals suffering from extensive tooth loss. Unlike traditional dentures, full mouth implants provide a permanent, natural-looking, and functional restoration that improves both oral health and overall quality of life

Benefits of Full Mouth Implants

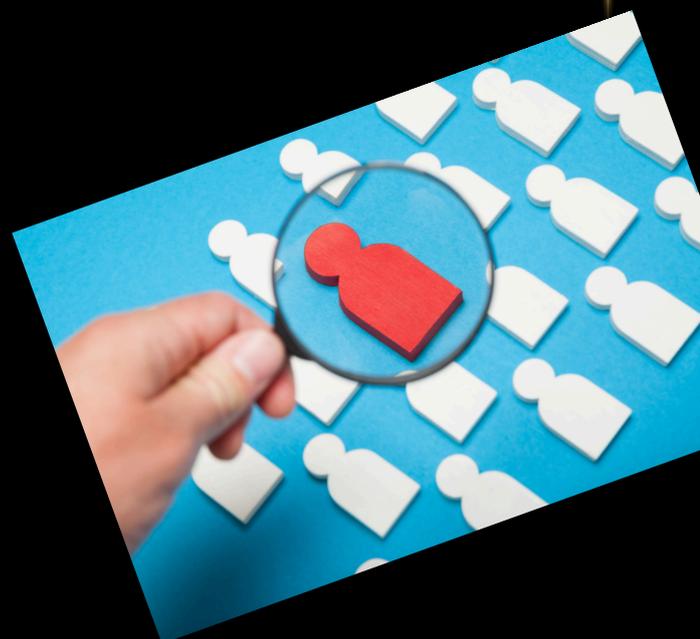

- **Permanent Solution:** Implants fuse with the jawbone, ensuring a stable and durable foundation.
- **Enhanced Aesthetics:** Restores natural-looking smiles with customized prosthetic teeth.
- **Improved Functionality:** Allows for normal biting and chewing, unlike traditional dentures that may shift.
- **Prevention of Bone Loss:** Stimulates the jawbone, preventing deterioration and maintaining facial structure.
- **Better Oral Health:** Unlike bridges, implants do not require altering adjacent teeth, preserving natural tooth structure.

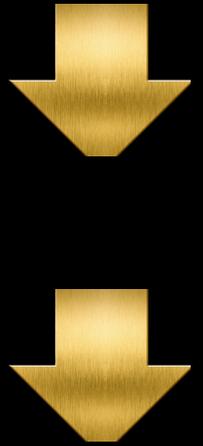

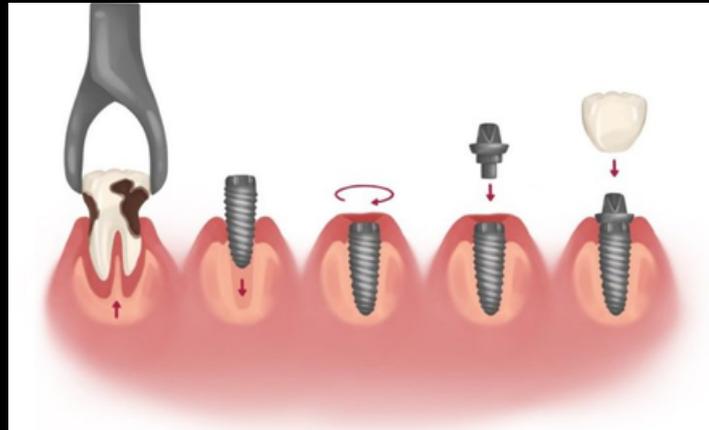

Who is a Candidate for Full Mouth Implants?

Ideal candidates include individuals with:

- Multiple missing or severely damaged teeth.
- Adequate bone density or willingness to undergo bone grafting.
- Good oral hygiene habits and overall health.

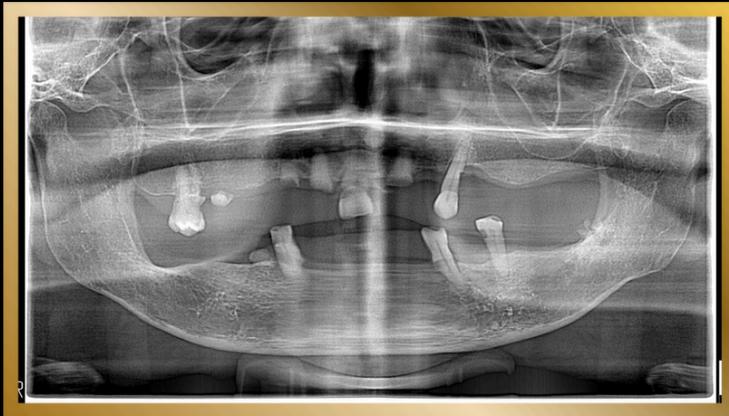

The Implant Procedure

- **Daily Oral Hygiene:** Brush and floss regularly using implant-friendly products.
- **Routine Dental Visits:** Schedule check-ups every six months for professional cleaning and examination.
- **Healthy Lifestyle Choices:** Avoid smoking and maintain a balanced diet to promote bone health and implant longevity.
- **Use of Night Guards (if necessary):** Protects implants from excessive grinding or clenching.

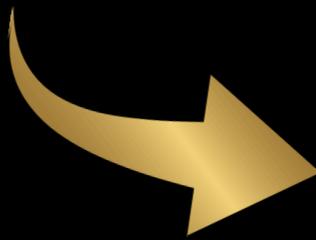

Our Happy Patient.....

A 70 Years old female reported to our clinic with a complaint of decayed and mobile teeth in both upper and lower arches. She is planned for full mouth rehabilitation using implants.

Preoperative preparation of patient is done which includes radiographic and blood investigations. Followed by placement of implants is done surgically supported by implant supported denture.
